

Haymanot Asmare

Email: hasmare463@gmail.com

LinkedIn: <https://www.linkedin.com/in/haymanot-asmare/>

Full-stack software engineer specializing in scalable web applications, backend systems, and AI-powered solutions. Experienced in Django, React, Node.js, and machine learning applications including text classification and intelligent automation systems. Strong focus on building real-world production-style systems and APIs.

SKILLS

Backend:

Python, Django, Django REST Framework, FastAPI, Node.js

Frontend:

Next.js, React, JavaScript, Tailwind CSS, HTML5, CSS3

Database:

PostgreSQL, MongoDB, MySQL, SQLite

AI / Machine Learning

scikit-learn, TF-IDF Vectorization, Logistic Regression, Text Classification

Automation Skills

Python Automation, OS Automation, API Automation, Telegram Bot Development

Tools

Git, GitHub, Postman

EXPERIENCE

Amhara Innovation and Technology Bureau (AITB):

Full-stack developer Intern | Sep 24, 2025 – Jan 24, 2026

Developed and maintained full-stack web applications using Django and React

Designed REST APIs for system integration and scalability

Worked on backend architecture, database design, and system workflows

PROJECTS

Anti-Malware Intelligent Detection System

Built a hybrid AI system combining rule-based logic and machine learning for malware detection. Implemented TF-IDF with Logistic Regression for text classification and fuzzy matching for detecting misspelled malware keywords and typosquatting attacks.

Skills: Python, Django, DRF, scikit-learn, pandas, PostgreSQL, TF-IDF, Logistic Regression, Rule-Based Systems, N-gram models

https://github.com/practicmakesperfect/Anti-malware_chatbot.git

Smart Inventory Management System

Developed a full-stack inventory management system for real-time stock tracking, analytics dashboards, and reporting. Built with modern React ecosystem and Node.js backend with MongoDB Atlas.

Skills: React, Vite, Tailwind CSS, Node.js, MongoDB Atlas, Axios, TanStack Query, Zustand, Recharts, REST APIs

https://github.com/practicmakesperfect/hakaton_proj.git

Car Rental System

Developed a full-stack car rental web applications using Django, JavaScript, and Tailwind CSS.

Implemented core features including Vehicle listings, booking management, user authentication, and availability tracking.

<https://github.com/practicmakesperfect/Car-rental-system.git>

BIIB Designs Company Website

Built the frontend of a global digital marketplace using React, TailwindCSS, and React Router to improve product discovery and user engagement for architectural plans, 3D models, and building services.

Solved the challenge of dynamic product listing and user interaction by implementing custom hooks for cart management, favorites, and authentication states.

Collaborated with a Django REST backend (PostgreSQL + Chapa) to enable secure digital transactions, product delivery, and client data management.

<https://github.com/practicmakesperfect/biib-frontend.git>

E-Commerce Web Application

Built a full-stack e-commerce web app with Django, JavaScript, Bootstrap, and SQLite3.

Implemented product listing, cart, checkout, and Chapa payment integration.

Designed database for secure and efficient order handling.

<https://github.com/practicmakesperfect/E-commerce-python-Django-project.git>

Client Feedback & Issue Tracking Portal

Developed a full-stack portal using Django, Django REST Framework, React, Celery, and TailwindCSS to streamline client feedback collection and issue tracking for AITB.

Solved the challenge of manual issue management by implementing automated notifications, status updates, and team assignment workflows using Celery for background task processing.

Enabled real-time tracking and reporting of issues and feedback, improving response time and operational efficiency.

Designed role-based access control to ensure secure and organized management of staff, managers, and client data.

https://github.com/practicmakesperfect/CFITP_backend.git

Amha Bingo Telegram Bot

Developed an interactive Telegram bot that automates a Bingo-style game experience for users. The bot handles real-time user interactions, random number generation, game state tracking, and winner detection. Designed to manage multiple players simultaneously while ensuring fair gameplay logic and smooth messaging flow through Telegram API integration.

Skills & Technologies Used:

Python, Telegram Bot API, Bot Automation, Game Logic Design, State Management, Randomization Algorithms, API Integration, Event-Driven Programming

EDUCATION

Wollo University

Software Engineering
